CLAIM AMENDMENTS

This listing of claims will replace all prior versions, and listing, of claims in the application:

Claims 1-13 (Cancelled)

Claim 14. (Withdrawn) A hydraulic fitting for a fluid conduit, the fitting comprising:

A nut having a seal portion, a body portion, and an internal bore, the seal portion including a frusto-conical exterior surface and a seal groove, the seal groove formed into the frustro-conical exterior surface and perpendicular thereto, the seal groove being defined by a constant radius;

An annular seal member coupled to the nut and disposed at least partially in the seal groove;

A threaded member extending through the internal bore; and

A female connector engageable with the nut and having a frusto-conical surface.

Claim 15. (Withdrawn) The fitting of Claim 14, wherein the annular seal member has a circular cross-section.

Claim 16. (Withdrawn) The fitting of Claim 15, wherein the depth of the seal groove is approximately equal to seventy-five percent of the cross-sectional diameter of the annular seal.

Claim 17. (Withdrawn) The fitting of Claim 14, wherein the frusto-conical exterior surface has an included angle of approximately 20 degrees to approximately 50 degrees.

Claim 18. (Currently Amended) A fitting for a fluid conduit, the fitting comprising: a unitary fitting member having a cap portion, an externally threaded portion and a seal portion, wherein the cap portion includes an annular shoulder portion, wherein the shoulder portion has a diameter at least equal to or greater than a diameter of the cap portion, wherein the cap portion is spaced and opposed from the externally threaded portion, the seal portion including a frustro-conical surface and a seal groove, the seal groove formed into the frustro-conical surface and perpendicular thereto, the seal groove being defined by a constant radius;

an annular seal member disposed at least partially in the seal groove; and
a port for <u>partially</u> receiving the <u>shoulder portion of the</u> fitting member, <u>wherein the</u>
<u>shoulder portion is operable to seal the port when the shoulder portion is partially received</u>
in the port.

Claim 19. (Original) The fitting of Claim 18, wherein the seal member has a circular cross-section and is compressible.

Claim 20. (Original) The fitting of Claim 18, further comprising a second seal member, the port having a groove portion for receiving the second seal member.

Claim 21. (Original) The fitting of Claim 18, further comprising a male connector connected to the fitting member, and a bore passing through the port, fitting member and male connector.

Claim 22. (Cancelled)
